

Cartridge Iron Filter Assembly/ Installation

Your cartridge iron water filter will require some minor assembly prior to installation. This kit includes the following components:

- Cartridge
- 20" housing and top
- Wall Bracket
- Wrench

1. Attach the included wall bracket to the black housing top with provided screws

2. After deciding on the location of the filter assembly in your home, attach it to the wall, and then into your water line using 1" male fittings on the in and out sides. Make sure the arrows on the top correspond to the flow direction of the water). You can bush the 1" threads down to 3/4" if needed.
3. Install the cartridge into the 20" housing and screw the housing onto the filter top. Use the Included wrench. The red button is for pressure release when replacing the cartridge.
