

The Hard Water Bullet Poly Scale RV Hard Water Conditioner treats hard water naturally without the need for salt and wasted water. Instead of stripping out essential minerals in your water, it filters and conditions the hard water leaving these important minerals in the water but eliminates the hard water build-up that destroys your water heater and plumbing fixtures. This is a completely portable, compact water conditioner that will attach to your RV, or to the RV parks water stand pipe.

Until recently, your only option for RV hard water treatment was to use a conventional salt based water softener. But with this technology, you will no longer need those bulky, expensive salt water softeners.

This water conditioner uses a three-part process that treats hard water, filters the water and uses polyphosphate which dissolves into the water and coats the calcium, iron and magnesium making it difficult for these agents to precipitate out of the water. The result is clean, great tasting water that won't create limescale.

This water conditioner will include the garden hose adapters which allows you to wash vehicles too. You can easily attach it to your homes exterior hose Faucet.

Filter Water Direct LLC specializes in salt-free water conditioners that are not only affordable, but eco-friendly. Please see our website at www.filterwaterdirect.com, or call us at 316-640-2237 for additional information.
